# KLEEMANN crusher jaws

## ROBUST AND DURABLE FOR RECYCLING APPLICATIONS

MOBICAT mobile jaw crushers are used to process medium-hard to hard materials. During recycling operations, the feed material can be extremely dirty.

Since caking and clogging can greatly reduce the performance of the jaw crusher in certain situations, the **new WT-XPERT crusher jaws** from KLEEMANN have been specially developed for these applications.

In this context, their special tooth profile significantly reduces or even entirely prevents the adhesion of the cohesive material.

The design of the crusher jaws' rear panel has also been optimised to create an improved feed angle within the crushing chamber, increasing the throughput of the material as a result.

### Key facts at a glance

- > WT = wavy teeth
- > Tooth pitch TP = 264
- > Made of KRS (KLEEMANN Resistant Steel)
- > For recycling applications
- > Can be retrofitted to existing systems

WT-XPERT CRUSHER JAWS			
Machine type	Model	Movable crusher jaw	Fixed crusher jaw
		Part no.	Part no.
MC 110(i) EVO, MC 110(i) EVO2	K005, K006, K014, K015 K116, K117	2660158	2660159
